Based on the search results, I can provide you with information on pricing and equipment types for glass fiber-reinforced thermoset plastic composite pipe manufacturing machines. However, **real photos of the actual machines are not available in these search results**—only product listings and technical descriptions are provided.

□ Machine Prices and Shapes/Configurations

The equipment used to manufacture glass fiber-reinforced thermoset composite pipes (GRP/FRP pipes) varies significantly in price depending on automation level, pipe diameter capacity, and whether it is a continuous or discontinuous (definite-length) winding system.

Machine Type / Configuration	Price Range (USD)	Key Features / Shapes Produced	Source
FRP Pipe & Tank Winding Machine (Basic)	$1,000 – $1,500	Tuyaux & réservoirs (pipes and tanks)	Hebei Dongding Chemical Trade Co., Ltd.
FRP Filament Winding Machine (Mid-Range)	$12,000 – $20,000	GRP/FRP pipes	Zaoqiang Lianzhong FRP Environmental Protection Equipment Factory
Multi-Axis Filament Winding Machine	$30,000 (starting)	Pipes and tanks, multi-axis capability	Hebei Jsun Industrial Technology Co., Ltd.
FRP Pipe Filament Winding Machine (Continuous)	$36,800 – $39,800	Continuous pipe production line	Hebei Tengjun FRP Co., Ltd.
Large-Diameter Winding Machine (FWJS-2600)	$30,000 – $40,000	Chemical equipment, large pipes	Hengshui Fangchen FRP Equipment Technology Co., Ltd.
Customized FRP Tank Winding Machine	$250,000 – $350,000	Custom-shaped tanks and large vessels	Moby Tec (Xiamen) Technology Co., Ltd.
Full Continuous Winding Production Line (CFW Series)	**$1,490,000 – $1,510,000**	High-end complete equipment, DN200–DN4000mm, continuous pipe production	Guangzhou Huachuang Intelligent Technology Co., Ltd.
GRP Pipe Making Machine (CFW)	$100,000	DN300–DN4000mm, 1bar–20bar pressure rating	Vidatech Composite Materials Co., Ltd.

□ Available Machine Shapes/Configurations

The search results describe several types of winding machines with different physical configurations:

1. Horizontal (卧式) Winding Machines

The mandrel (芯模) is placed horizontally. The mandrel rotates while a carriage (小车) moves along the bed, guiding fiber tows to lay them at a specific winding angle . This is the most common configuration for pipe production.

2. Continuous Winding Production Lines (CFW Series)

These are large-scale automated systems consisting of multiple integrated components: spindle transmission, steel belt propulsion, sand adding device, infrared heating system, PLC control system, and online cutting device . The pipe is formed on a continuously moving steel belt mandrel, allowing uninterrupted production.

3. Definite-Length (定长) Winding Systems

Pipes are wound on fixed-length mandrels (standard lengths of 6–12 meters). The main components include a lining making machine, winding machine, curing station, demolding machine, trimming machine, and resin mixing/supply station .

4. Specialized Machines for Different Shapes

- **FRP Sand-Added Pipe Winding Machine**: Specifically designed for pipes with a quartz sand core layer to enhance ring stiffness

- **Cantilever Lining Machine (悬臂梁制衬机)**: Used for manufacturing the inner lining layer of FRP storage tanks

- **FW-4000 Horizontal Tank Winding Machine**: For large FRP storage tanks

- **Vertical Winding Machines (立式)**: For vertical tank and vessel production

□ Regarding Real Photos

The search results include links to product image galleries on platforms like Made-in-China.com , but the actual image content is not displayed in the text search results. To view real photos of these machines, you would need to visit the product listing pages on the respective B2B platforms (Made-in-China.com, Alibaba, etc.) or contact the suppliers directly.

□ Key Suppliers in China

Several suppliers are mentioned repeatedly across the results:

- **Hebei Yaorong FRP Equipment Co., Ltd.** (**河北曜荣玻璃**钢设备有限责任公司) – Based in Hengshui, Hebei, with 30+ employees and 5 technical engineers, specializing in computer-controlled winding machines

- **Guangzhou Huachuang Intelligent Technology Co., Ltd.** – Supplier of the high-end CFW series continuous winding production lines

- **Hebei Tengjun FRP Co., Ltd.** – Offers continuous winding machines with integrated diagnostic systems

- **Hengshui Deli FRP Equipment Co., Ltd.** – Provides winding equipment for pipes ranging from DN300 to DN3200

For accurate pricing and to view actual machine photos, I recommend contacting these suppliers directly with your specific pipe diameter, pressure rating, and production capacity requirements.
