Based on the search results, here are the details on pricing for industrial vertical injection molding machines suitable for polyamide (PA) composites. **Real photos are not available in the search results**, but several listings include links to product image galleries.

□ Price Overview for Vertical Injection Molding Machines

Prices vary significantly based on clamping force, injection capacity, automation level, and whether the machine is new or used. The table below summarizes available pricing for machines that explicitly process PA (polyamide).

Model / Specification	Clamping Force	PA Compatible	Price (USD)	Source
FZY-100 (Rich Union)	~100T	Yes (PA listed)	**~$9,700**	Alibaba
Tai Zhu 120R2 Rotary	120T	Yes (PA listed)	**~$45,714**	Alibaba
Standard Vertical (Guangdong Xihua)	Not specified	General plastic	**$9,500 – $12,000**	Accio
85T Rotary Table (Hangzhou Denice)	85T	Yes (PA compatible)	**$25,000 – $26,000**	Accio
TA-800 (Double Color)	800 kN (80T)	Not explicitly stated	Price on request	Okorder
Vertical Molding Machine (Sinrad SR-GQ150)	15 tf	Rubber/Plastic	**Starting $2,000**	Accio

□ Available Machine Shapes/Configurations

The search results describe several physical configurations of vertical injection molding machines:

1. Standard Vertical (C-Frame)

The clamping unit and injection unit are arranged vertically. This design is ideal for insert molding, where metal inserts or other components are placed in the mold before plastic injection . The FZY-100 model from Rich Union (priced at ~$9,700) is a basic vertical machine suitable for PA processing .

2. Vertical Rotary Table Machines

These machines feature a rotating lower platen (turntable) with two or more stations. While one station is in the clamping/injection position, the other station is accessible for loading inserts or unloading finished parts. This significantly increases production efficiency for insert-molded PA composite parts .

3. Vertical Two-Color / Multi-Material Machines

These specialized machines have two independent injection units, allowing the production of parts with two different materials or colors in a single cycle. The Tai Zhu 120R2 is an example of a rotary vertical machine for hardware overmolding . A three-color machine is also listed at $56,000 .

4. Low-Profile / Compact Vertical Machines

Some manufacturers (like ATOM from Korea) have developed low-profile vertical injection machines that reduce height to 1/3 of conventional machines, minimizing installation space. These use servo motors for 60-75% energy savings .

□ Regarding Real Photos

The search results do not contain actual image data, but several listings include links to product image galleries:

- **Alibaba**: The FZY-100 and Tai Zhu 120R2 listings typically include multiple product photos

- **Made-in-China**: The HJV200 listing from Ningbo Haijiang includes product images

- **Machinio**: Used vertical machines often have "Contact seller for additional photos"

- **DirectIndustry**: The HD-R917 listing includes product specifications and images

□ Key Suppliers for PA Composite Processing

Several suppliers explicitly list PA (polyamide) as a compatible material:

- **Rich Union** (Guangdong) – FZY-100, ~$9,700

- **Tai Zhu Precision Machinery** (Dongguan) – 120T rotary machines, ~$45,714

- **Hangzhou Denice Machinery** – 85T rotary table, $25,000–$26,000

For accurate pricing and to view actual machine photos, contacting these suppliers directly with your specific requirements (part dimensions, insert type, production volume) is recommended.
